**Research Title and Abstract:**

**Unique Assets, Quality Uncertainty and Noisy Prices**

This project estimates real estate asset uniqueness along previously not quantifiable dimensions, including shape, size, architecture, perceived beauty, maintenance or shape similarity. This richer picture of individual buildings and their comparability to other properties will improve any estimates of fundamental value. More interestingly, though, it will reveal distributions of transaction values in relation to fundamental value. Since uniqueness of the assets co-determines the availability of information from comparable sales, I hypothesise that uniqueness is also linked to the absolute deviations of sales prices from fundamental values: If little is know about fundamental value, then sales prices will contain more noise.

**Research findings to Date:**

The new research programme is ongoing and has produced working papers and two (modestly sized) research grants (CDBB, £25K; ZEW SEEK EUR 75K):

- "*Machine Learning, Building Vintage and Property Values*" (with Erik B. Johnson)
  
  This project has been presented at three relevant conferences in our field

  ◦ ASSA, Annual Meeting (Atlanta, Jan. 2019)
  ◦ Weimer School Session, Homer Hoyt Institute (Jan 2019, Singer Island, Florida). This conference is by invitation only and I am honoured to have been selected to participate.
• "The Odd One Out: Predicting Price Coarseness" (with Carolin Schmidt, ZEW Mannheim)
  ◦ Submitted to ASSA 2020
  ◦ Will present at Weimer School May Session, Homer Hoyt Institute (May 2019, Singer Island, Florida). Conference focus will be "New data and tools in real estate research"

• Centre for Digital Built Britain (CDBB) project "Machine Learning and AI in the Built Environment"
  ◦ This project improved the foundations for applying tried-and-tested machine learning (ML) approaches to the built environment. This mini project reduced the cost of creating and deploying ML systems by creating versatile and extendable API’s, data management infrastructure and mobile apps. A future version of the API’s might be commercialised in areas like mortgage origination, insurance claim processing or property tax (non-UK, though) estimation

• Research grant (EUR 75K) from Strengthening Efficiency and Competitiveness in the European Knowledge Economies (SEEK) at the ZEW – Leibniz Centre for European Economic Research. Joint application with Carolin Schmidt.
  ◦ Follow-up to the CDBB project to improve ML transfer learning in image recognition, specialised to the the built environment. Real estate research will finally get computer vision models that have been fully retrained with building data instead of general purpose models.
  ◦ The funding will be used to support a new PhD starting under my supervision in September, IT infrastructure and travel.

• Other working papers (not directly related to CERF project)
  ◦ "Exogenous Demand Shocks and Liquidity of Turkish Residential Real Estate", with Tuğba Güneş
  ◦ “Local market power in residential property markets”, with Joseph Ooi
  ◦ “500 Years of Urban Rents, Housing Quality and Affordability”, with P. Eichholtz and M. Korevaar

Publications generated during the CERF fellowship(s)

Seminars, conference presentations (since Aug. 2016)

• Participated in CERF Cavalcade (23.5.2018) with “Unique Assets, Quality Uncertainty and Noisy Prices”

Press releases and other academic activities

• I am co-organiser of the Cambridge/NUS/Florida Real Estate Finance and Investment Symposium which will be held at the University of Cambridge, on Sep. 26-27\textsuperscript{th}, 2019. This symposium is linked to a special issue at the Journal of Real Estate Finance and Economics. I am an editor for this special issue.
